# Introduction

We believe that humanity is always striving towards greatness, and that is why we are very excited to announce our plans for the Dallas Fort Worth - Cardinal Drive International Airport. We propose that we demolish the old decaying airport currently in inner-city Dallas, and move it to pristine Melissa, Texas. It will have many state of the art features, all of which are to be described in detail later in this document. We are certain that it will turn out to be a success, with many commercial airliners such as Southwest, Delta, United, Lufthansa, and the US Military agreeing to cease all operations in other locations and be completely dependent on our airport. No one has ever come close to this level of finesse and sophistication.

With our unique combination of luxury, competitiveness, and innovation, we will completely crush any other competitors, but all in a clean and professional manner that our forefathers envisioned when they founded this great land. This airport can bring America out of debt and make our infrastructure the best in the world.

Official Theme Song of DFW-CDIA is:  
Deion Sandals by Riff Raff

# Road

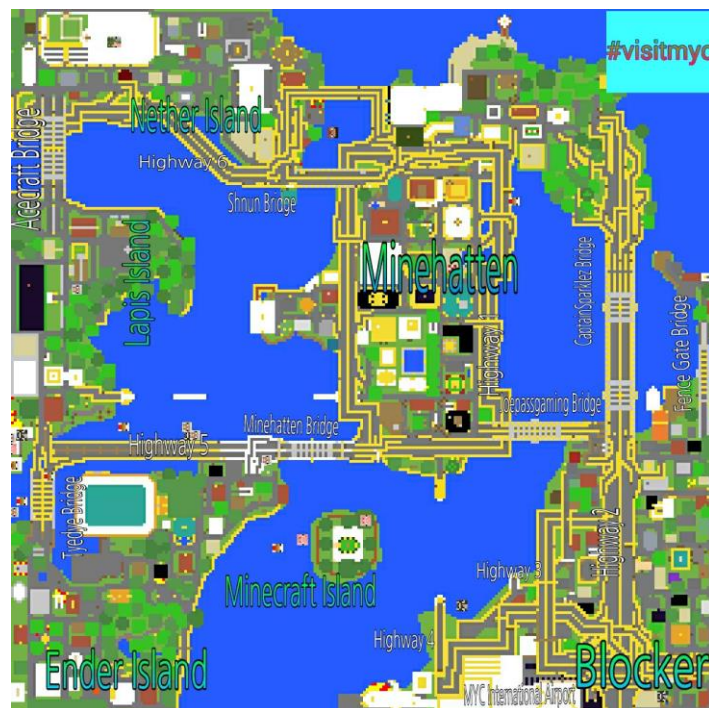

- The roads will be resurfaced with reinforced concrete mixed with diamond powder.
- Hwy. 5, Cardinal Drive, and neighboring streets are to be demolished completely. Estimated time of completion is 2022.
- When demolition is done in only 6 short years, a 48 lane highway (24 on each side) is to be constructed in order to service the immense traffic flow of the Airport.
- A state of the art bottleneck will combine both thriftiness and effectiveness into one package.
- In order to increase efficiency, a one lane road will be established next to the refugee camp with tire spikes in order to discourage ruffians from driving on the astroturf.
- Astroturf is used in lieu of grass so we can add poison darts and razor sharp points to prevent loiterers.
- We made highway 5 a triple decker highway to ensure top notch efficiency and the bottlenecking of the 24 lanes into one lane is very appropriate.
- We have a strict, no grieving rule in our airport, if caught with tnt you will be given a D-Hall.
- Speeding will be punished with Crucifixion.

## Updated Traffic Laws

- In Melissa only, cars will drive on the left side of the road on the northern half of the city and the right hand of the road in southern Melissa
- The highway will incorporate a mixmaster that will ensure peak performance at all times.
- Highway speeds will be a blazing 5 mph but the bottleneck will be unlimited.
- Speedbumps will be built by John Cena so you can't see them. It's your responsibility to drive a safe speed.
- All road signs will be written in Aramaic.
- Any and all teenage drivers are, at all times, required to drive exactly 55 MPH under the speed limit.
  - If the speed limit is under 55 MPH, students still have to follow the law and must drive backwards.
- They must also constantly use their phone and they have to pretend the steering wheel is hot lava.
- In a court of law, the judge and an impartial jury will determine if a teen was a speed demon or not. If yes, the teen is qualified to drive any vehicle. If no, they must become indentured servants to the nearest Hot Topic.
- The teen may submit an essay on why they're a speed demon in Egyptian hieroglyphics.
- If you run a stoplight, you must roll down your window and yell "RAWR XDDDDDDDDDDDDDDDDDDDDDDDDDDDD"
- To earn your drivers license, you must pass the Song Examination
- If anybody doesn't follow the rules then they will be pulled out of their car, attached to a refrigerator and skis and be forced to fall to their death in the strip mines

# Relocation of Housing

- Because of the space needs of an international airport, housing developments are going to have to be demolished.
- A \$66,455,043.99 invoice will be sent to all residents as an incentive to move early.
- Anyone still in their homes by the time of construction will have their house imploded with them inside.
- This is not optional.
- We are conscious that people need places to live, so people can live on derelict planes. They will be demolished into scrap metal but you can still live in that.
- We are offering replacement housing in Ciudad Juarez, Mexico or you may live in one big house covering the entire continent of Africa. Lastly, you can be chosen specifically to live in Mine York City. You may choose one.
- James Dagley will be assigned the position of mayor of Mine York City.

# Runway Planning

- For the larger planes, they can land where the turning lanes are available
- Strip mines will be built on the road to make sure pilots and drivers are aware of their surroundings; WATCH FOR STRIP MINES PLZ!
- **STRICTLY NO ENDERMEN ON THE RUNWAY AT ALL TIMES**
- The road has a 25° curve to it to ensure planes must slow down as they land
- We install a system where the planes go right to the terminals (portables) so it is easier for people to get on
- To mark the runways during the day we use industrial fog machines, and in the night we use laser pointers trained on the planes.
- Planes must stop on a dime to let ducks cross the runway.
- In the event of a potential rainstorm, the runway will be picked up and moved inside to extend longevity. All flights will be suspended indefinitely.
- The Runway and the terminals must constantly be playing the Kahoot lobby theme slowed down to 6 days over the PA system.
- A Kahoot!® Game will be provided on any of the following subjects:
  - Minion Lore
  - 2-4 Grade Math
  - Reasons why Communism works
  - Microsoft Windows NT x86 Framework
- Any username that is goofy will be removed, and the responsible party will be publicly tarred and feathered using Dodo bird feathers.
  - **DON'T ASK HOW WE GOT THEM!!**

## Aircraft Regulations

- For ongoing ground traffic, air traffic must yield the right of way to cars on the road to ensure safer driving
- During times of heavy ground traffic, cars are expected to speed up to 200mph so planes can land on top of them.
- In the event of a plane crash, there is free reign. Looting is encouraged, and emergency responders will be turned away on the spot.
- Because we are so state of the art, the FAA denied our claim for a license.
  - This is not a closed airspace, so watch out for other private aircraft.
- Flight attendants will be highly trained lizards.
- If something malfunctions on a plane, passengers must climb outside and fix it.
  - Any passenger who does not pull their weight will be expelled from the flight without a parachute.
- Planes will be fueled by whale oil because we want to help end the dependence on petroleum.
- If someone declares a 1v1, it must be a trickshot contest.
- We overbook every flight by about 90 passengers, so it's first come first serve.

# Refugee Camp

- The Melissa football stadium will be used for the refugee camp of stranded travelers
- On home games, the refugees will still be allowed on the field during playing time and just have to avoid the football players
- One person will be generously granted one square foot for themselves at the camp due to overpacked crowds always missing their flights
- Everyone that uses the refugee camp will have to become blood brothers with anyone staying within a 10 yard radius of them
- No std testing will be offered at the camp and it is the refugee's responsibility not to spread disease through becoming blood brothers
- In order to increase cost effectiveness, refugees are required to spend a minimum 20 hours a day on our airplanes, at a great deal of 2x regular rates.
- Refugees must be force fed expired Dr. Pepper from 1968.
- Refugees must attempt a Poptropica speed run biweekly
  - If they don't complete the run in less than 8 minutes than they will be exiled into the Sahara Desert.

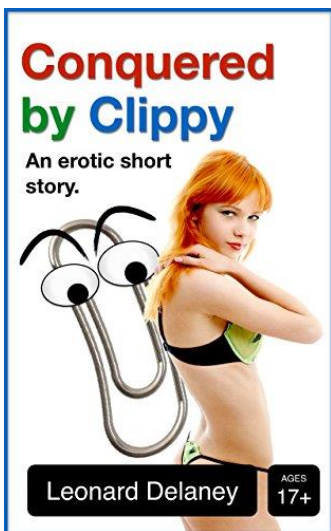

# Trams

- People will be allowed to ride on the trams for a small fee of \$4,999 per person
- People are not allowed to exit the ride if seated.
- We privately contract out our trams, so any injuries inflicted upon passengers will not be our liability.
- Any outside forms of transportation are strictly prohibited.
- We will have trams for remote parking only, which is located in New Delhi, India. Any parking in between you must walk.
- The trams are functioning in the form of a gigantic praying mantis
- When the praying mantis really gets it legs moving it can travel at speeds of 365 MPH, while hovering over traffic
- There will only be one mantis available so if you don't catch it you must wait in India for it to make a full round trip
- The mantis will simply jump over the oceans, and passengers will ride the boat pictured below.
- ETA is 3 years in favorable conditions.

# Religious Sessions

- Any signs of a previous religion will result in a \$64,379.00 fine and you will be forced to wear a yellow star on your shirt.
- One god can be chosen from the following, as we are polytheistic you must also be forced to worship Bindi Irwin.

## Other Information

- There is only one approved haircut in the airport (pictured below) and those who violate these rules will flogged immediately by the miners using highly radioactive uranium bars.
- In the event of not being able to access our website, it's probably just the filthy aboriginals performing DDoS attacks. Please disregard this, as we will launch them into space using a T-shirt cannon if caught doing this.
- While inside, walking is not allowed. You have to ride bumper cars to keep the floor clean.
- Bumper cars are gas powered, but there are no windows for safety concerns. If you feel nauseous from the fumes, run onto the runway in front of a plane and tell a pilot this phrase, "I have a tummyache". They know what it means.
- The Mushroom biome is OFF LIMITS!
